

I am extremely disturbed that the NAB is trying to stop XM radio from broadcasting Traffic and Weather. As a traveler, I find these stations to be extremely useful. They enable me to change my route by knowing well in advance the potential bottlenecks along by route. In addition, the reports are much more in-depth than I have ever found on a "local" station. And the reports are continuous. Please do not side with the NAB. If "local" radio wants to keep listeners, then make them provide the same quality service that XM radio is providing. It's as simple as that. Thank you.
